

Squalene 1000

瑩肌 純正角鯊烯

Super Antioxidant, Protect Body Cell

What is Squalene?

Squalene is an unsaturated hydrocarbon (C₃₀H₅₀). It is shark liver oil derived from the liver of the deep sea shark. Not only like cod liver oil, Squalene contains the same benefits such as vitamins A and D, and omega-3 fatty acids, it is also naturally rich in alkoxyglycerol level, a natural immune booster which provides high capacity of oxygen to body cells. Shark liver oil helps maintain a healthy lifestyle and promotes a general well being.

Function of Squalene

Squalene as an Oxygen Carrier

Sharks lived in 3000 miles under water. Scientists discovered that squalene that stored in their liver is the key enable them to survive in such a low temperature, low oxygen content and low visibility condition. This unsaturated hydrocarbon shows its obvious curable effect to hypoxia diseases. By carrying the oxygen to human brain, it improves our retentivity and promotes cell metabolism, supports wound healing, revitalization and regeneration of cells and increases organs reactivity.

Squalene as an Antioxidant, Anti-aging Agent and Protector of Cells

When body cells are attacked by free radicals, oxidation occurs. Cells will start to corrupt and lost. The same process happened in aging. When the oxidized cells are more than the body can repair, organs and tissues will start losing their functions and mutate. Aging will occur and finally died. Squalene eliminates free-radicals and suppresses the activities of free-radicals, protects the body from cell damage and enhancing the operation of human body.

It is highly moisturized while not oily, therefore it can easily diffused into and protect the skin. Squalene accumulates at the greatest concentrations in the skin,

where it appears to play a vital role in quenching free radical oxygen (oxygen singlets) by forming lipofuscin with lipoproteins which is an anti-aging substance, preventing the harmful effects of lipid peroxidation, DNA destruction, environmental pollution, second-hand smoke, alcohol, drugs, pressure, radiation, UV light, electromagnetic wave and long exposure to sunlight.

Squalene also appears to play a similar role in the retina, where it is known to have some kind of important function.

Squalene For Detoxification

Squalene can reduce lipid level of blood, prevent arteriosclerosis, protect cardiovascular system and control level of steroids and prevent aging. Squalene removes animal fat and various waste materials whilst circulating in the blood, cleaning the circulatory system. It builds an anti-virus system to minimize the harm brought by outside materials in the body. It also helps improve the function of the kidneys and livers. Administration of squalene at high doses induces the detoxification and elimination of toxic pollutants such as organochlorines, theophylline, and strychnine in animals.

Squalene 1000 is not chemically processed and encapsulated in a GMP licensed laboratory in New Zealand.

Squalene has the following benefits

- *improve immune system and body performance
- *promote energy levels, help provide stamina and endurance
- *antioxidant and detoxification
- *suppress generation of free radicals
- *increase metabolism of body cells
- *strengthen functions of lymphatic tissues
- *amend DNA and generate collagen
- *anti-aging reagent and skin protector
- *maintain healthy retina

- *cardiovascular and brain protector
- *improve appearance of skin and hair
- *improve joint functions and mobility

Composition:

Each softgel capsule contains: Squalene 1000mg (99.9% Pure Extract of Shark Liver Oil)

Direction:

Adults take 1-2 softgel capsules daily
Children ages 6 and up take 1 softgel capsule daily.

Made in New Zealand
